Bibliographies in the Quick Bibliography Series of the National Agricultural Library, are intended primarily for current awareness, and as the title of the series implies, are not indepth exhaustive bibliographies on any given subject. However, the citations are a substantial resource for recent investigations on a given topic. They also serve the purpose of bringing the literature of agriculture to the interested user who, in many cases, could not access it by any other means. The bibliographies are derived from computerized on-line searches of the AGRICOLA data base. Timeliness of topic and evidence of extensive interest are the selection criteria.

The author/searcher determines the purpose, length, and search strategy of the Quick Bibliography. Information regarding these is available upon request from the author/searcher.

Copies of this bibliography may be made or used for distribution without prior approval. The inclusion or omission of a particular publication or citation may not be construed as endorsement or disapproval.

Extract: The purposes of this paper are (1) to discuss the nature of agricultural cooperatives in the U.S. farm economy, by documenting their growth and delineating their functions, (2) to describe the evolving historical relationship between agricultural cooperatives and federal agricultural policy, and (3) to speculate on the likely impact that an era of federalism in agriculture will have on the future development of agricultural cooperatives and on their potential for increasing the incomes of U.S. farmers. For reasons that will emerge in the course of the exposition, this paper will deal primarily with the cooperative marketing of agricultural commodities and devote only cursory attention tothe cooperative purchasing of farm inputs.

Agricultural cooperatives: retained patronage dividends and the federal Securities Acts.
Centner, T.J. Fargo : North Dakota State University. North Central journal of agricultural economics. Jan 1984. v. 6 (1). p. 36-47. Includes 20 references. (NAL Call No.: HD1773.A3N6).
Extract: The investment of retained patronage dividends in agricultural cooperatives has been accompanied by equity redemption programs that fail to provide for the timely return of patrons' interests. The unfairness of some equity redemption programs with regards to deceased and retired cooperative patrons could result in judicial or legislative action. Recent judicial interpretations of the federal Securities Acts suggest that

dissatisfied cooperative patrons could commence legal actions under these Acts for damages, injunctions and other appropriate relief.

An analysis of factors affecting member control of agricultural cooperatives.
Elitzak, H. ; Boynton, R.D. West Lafayette, The Station. Station bulletin - Dept. of Agricultural Economics, Agricultural Experiment Station, Purdue University. Aug 1981. Aug 1981. (341). 45 p. 20 ref. (NAL Call No.: HD1775.I6I5).
Extract: Member control was examined in seven midwestern dairy and grain/farm supply cooperatives. Analytical models were used to compare member control levels in cooperatives of different sizes and types and to identify factors affecting the level of control members perceive they have. Mail surveys were the primary form of data acquisition. No significant non-response bias was measured. Members of small cooperatives and grain/supply cooperatives expressed higher levels of perceived control than did members of large and dairy cooperatives, respectively; however, there were no differences found for many aspects of member satisfaction with the cooperative.

(NAL Call No.: aHD1491.A1U54).
Abstract: This report analyzes the financial structure of farmer cooperatives, including amounts, types and sources of equity and borrowed capital. Sales and other operating income and amounts and distribution of net savings and losses are also covered. Data are presented by major function, principal products handled, geographic location and income tax status of the cooperatives. While the data are for fiscal year 1976, they are benchmark data and will be useful indefinitely as base data for conducting other studies dealing with cooperative financing.

A framework for structural analysis of Thai communities and agricultural cooperatives: a means for understanding synchronism and conflict.
Orr, R.H. Knoxville, The Ins..tute. International report - University of Tennessee, Institute of Agriculture. Sept 1981. Sept 1981. (1). p. 17-24. 7 ref. (NAL Call No.: 920408(AGE)). Extract: Government dissatisfaction with the performance and slow growth of Thai cooperatives has prompted an effort towards extensive reorganization and upgrading. The evidence suggests that such strong reliance on one particular organizational form - i.e. cooperatives - is unnecessary, risky and inefficient. Cooperatives should be promoted and supported in those areas in which they perform the task at hand efficiently. Membership in cooperatives should be limited to those farmers who provide reliable support for the organization. Other forms of institutional activity - both government and private - should be utilized for assisting farmers in areas in which cooperatives do not function well.

Extract: Cooperatives need to adopt more effective systems for ensuring equity is held by patrons in proportion to use. A disparity index was developed to measure the degree to which it is not. To compare the simulated performance of alternative equity formation and redemption programs, disparity index values were calculated for a hypothetical cooperative. Results demonstrate that plan performance depends largely on patron histories of patronage and equity investment. Nevertheless, revolving fund plans with revolving periods up to five years usually had the lowest disparity index values. Generally, plans with the lowest disparity index values required the greatest annual patron investments.

Optimal market pools for agricultural cooperatives.
Buccola, S.T. ; Subaei, A. Ames, Iowa : American Agricultural Economics Association. American journal of agricultural economics. Feb 1985. v. 67 (1). p. 70-79. Includes 13 references. (NAL Call No.: DNAL 280.8 J822).
Extract: Most agricultural marketing cooperatives distribute members' net revenues on a pool basis. The present paper outlines various pool options and provides a framework for identifying privately and collectively optimal pooling rules. Individual members' pool choices are found to vary according to farm enterprise and risk aversion level. A collectively optimal rule depends generally on risk aversion and on the method used to aggregate individuals' expressed preferences. In the instance examined here, however, the collective optimum is somewhat insensitive to assumed risk aversion.

Kraenzle, C.A.XFCFB. ; Volkin, D Washington : The Service. Cooperative research report - United States Dept. of Agriculture, Economics, Statistics, and Cooperatives Service. Feb 1979. Feb 1979. (4). 32 p. (NAL Call No.: aHD1491.A1U54).
Extract: Little is known about why or to what extent cooperatives use subsidiaries for carrying out various functions. Their increasing use, indeed, the increasing dependence of some regional cooperatives on subsidiaries, has implications for other cooperatives considering this organizational tool. This study was undertaken to answer some of the questions concerning the use of subsidiaries. 1. Why were the subsidiaries established? 2. What are the important advantages and disadvantages of using a subsidiary compared with a division or department within the parent cooperative organization? 3. What policy implications arise from cooperative use of subsidiaries? The study draws on the following sources of information: annual reports and other information related to specific cooperatives and their subsidiaries; literature and case histories involving subsidiaries and their use; and personal interviews with officials of eight selected cooperatives using either a unique type of subsidiary arrangement or a relatively large and diverse number of subsidiaries.

Extract: The share of patronage refunds retained by an agricultural cooperative is modeled as arising from the portfolio decision of its median member. The member is viewed as maximizing expected utility by allocating wealth between investments in farming assets and equity in the cooperative. Determinants of the share of patronage refunds retained are the expected rates of return on these two investments, their variances, their covariance, and the expected future share of patronage and its variance. Empirical examinations of aggregate cooperative data and cross-section analysis of seventeen regional supply cooperatives are found to be consistent with the model.
